EDUCATION

Bachelor of Arts in Computer Science & Economics, McGill University 2024–2028

Coursework: Probability, Honours Economic Statistics, C++, Discrete Structures, Linear Algebra, Computer Systems, Software Systems, Software Design; **Current:** Econometrics, DSA, Programming Languages & Paradigms.

SKILLS

Programming: Java, C++, Bash, Python, SQL

Tools & Frameworks: Git, Docker, Spring Boot, AWS, Amazon Bedrock, MCP, CMake, Catch2, JUnit

Data & Research: Relational Databases, Information Retrieval, Statistical Analysis, R, Stata

RESEARCH & TECHNICAL EXPERIENCE

Product Analyst Intern

Jul 2026– Aug 2026

CHEQ

- Independently designed the semantic knowledge base and retrieval queries for a client-facing LLM agent across three databases, including one handling live data spanning 15,000+ customers and 1B+ daily site interactions.
- Audited and revised the agent’s MCP and semantic layer, identifying retrieval errors, backend-logic issues, and restricted-data exposure; corrected queries and authored retrieval guidelines for the AI team.

Rotational Technology Intern

Jun 2026 – Jul 2026

I-NEXT Technology, Sourasky Medical Center

- Built and deployed AWS agent infrastructure for a clinician-scheduling prototype, configuring a Strands agent, Bedrock AgentCore, Docker, and AG-UI/CopilotKit for an end-to-end hackathon demo.

Research Assistant

Sep 2022 – Apr 2024

Prof. Hanna Lerner, Tel Aviv University

Remote

- Reviewed and analyzed academic literature on labor rights in global medical-supply chains during COVID-19.
- Evaluated sources for credibility, relevance, research gaps, and potential extensions; documented summaries, critiques, and proposed research questions to support future faculty and graduate research.

PROJECTS

C++ Market Simulator / Limit Order Book

C++

- Building a C++ limit order book supporting buy/sell order entry, cancellation, trader validation, and execution of crossing orders using price-time priority.
- Implemented ordered price levels, FIFO order queues, and direct order-ID lookup, with Catch2/CMake tests covering order validation, book operations, and matching behavior.

Java Search Engine & REST API

Java, Spring Boot, JUnit

- Developed a Java search engine supporting document ingestion, inverted indexing, ranked multi-term retrieval, and a Spring Boot REST API, with testing of scoring and ranking behavior.

ACTIVITIES & LEADERSHIP

McGill Women in Computer Science

VP Events (Jul 2026 – Present) | **Events Director** (Mar 2025 – Jun 2026)

- Lead a 7-person team running 1–2 events monthly and coordinating 20+ company, faculty, and student partners; organized events including 115+ attendee Wine & Cheese Night.

Other: McGill Journal of Economics (VP Technology); McGill Office for Science & Society (Student Contributor).
